

**EU REACH STATEMENT
(Regulation EC n.1907/2006)**

Dear Customer,

The European Regulation CE n.1907/2006 regarding the **Registration, Evaluation, Authorisation and restriction for CHemical Products (REACH)**, defines new rules in the management of chemical substances and promotes contacts between suppliers and downstream users of substances, preparations and articles.

With this communication, AFV Acciaierie Beltrame SpA intends to inform its customers of the following aspects concerning the application of the REACH Regulation to products produced and sold by Group companies:

- *The semi-products (billets, blooms) and the rolled profiles are considered articles in which there are no substances that may be intentionally released during normal or foreseeable use. Therefore, there are no registration obligations for them (Article 7 of the Regulation).*
- *Our steel products (articles) are therefore exempt from the obligation of any safety data sheet (Art. 31 of the Regulation).*
- *None of the substances present in the supplied steel products is included in the annex XIV to the Regulation (candidate list of substances subject to authorization, issued by the European Chemical Agency - ECHA).*
- *No substances contained in our products are currently considered as "priority" (or SVHC - substance of very high concern, according to the current definition) to imply their inclusion (even in the future) in the list of candidate substances for authorization.*

In any case, AFV Beltrame will keep you updated on any regulatory changes that may affect our products.

For any further technical clarification, you can contact our Environment and Safety Department:
