Recycled Content Declaration

Dears,

The manufacturing process carried out in DONALAM, Romania, Calarasi is based on the hot rolling mill, technology which does not recycle and not melts steel scraps. Donalam is a hot rolling mill that produces steel special bars using blooms as raw material. We purchase our raw material from suppliers with varying processes to assure we procure appropriate high quality raw materials at competitive prices relative to the specific requirements of each application.

Given that a variety of suppliers are used, the following data summarizes the information regarding recycled content that was supplied to us from each of our melt sources.

Total volume raw materials from all suppliers in 2023- **102,950 tons**

Average content of recycled material in finished products **61 %**

This declaration is retroactive for all deliveries of raw materials from 01/01/2023 to 31/12/2023 and is according with SR EN ISO 14021:2016.

Yours sincerely,

DONALAM
