

## RECYCLED CONTENT DECLARATION

Steel products at Vicenza plant are manufactured with external steel scraps and internal recovered scraps. This may lead to achieve credits in a set of several programs recognizing recycled content as a criteria (e.g. U.S Green Building Council, Leadership in Energy & Environmental Design LEED), as well as compliance with the Minimum Environmental Criteria (CAM) for building interventions of regulated works by the Public Contracts Code.

Gruppo AFV Beltrame is monitoring pre-consumer and post-consumer inputs according to ISO 14025 standard (Type III environmental declarations) applied to specific ECSC (CECA) codes, then calculating the recycled content taking into account steel mill mass balance and process yields. This information is reported in the Environmental Product Declaration (EPD) and validated by a third party.

**MR4 - Recycled Content:**

Reference Production Year	Reference Plant	Recycled content	Pre-consumer recycled content	Post-consumer recycled content
2023	Vicenza plant	> 95%	41%	55%

**MR5 - Regional Materials:**

Raw Material	Regional Iron Scrap within 800 km from Vicenza (VI)		Regional Iron Scrap outside of 800 km from Vicenza (VI)	
	Percentage	Zone / Region	Percentage	Zone / Region
Scrap	> 95%	Italy Europe	< 5%	Europe

Vicenza, 13/05/2024.
